

Ventura Open

Ventura Open

- Ventura Open is a partitioning system of modular construction with an open junction that makes the wall look like a “panel wall”.
- The finish of the rectangular panels can be varied from veneer sheets to vinyl surfaces and steel plates.
- The Ventura Open junction creates a distance of 6-17 mm between the panels.
- Ventura Open offers many possibilities of floor, ceiling and corner mounting, and can be integrated with Flexica glass and door modules.
- As standard, modules are delivered in widths of 900 mm and 1200 mm; other widths can be made to order.

General information

Triplan partitioning systems are easy to install. The various systems are all based on the same components, so that a wall can be converted to another type; a glazed wall can, for example, be changed to or integrated with a panel-covered wall in a short time and without dismantling the whole structure.

Triplan partitioning systems are delivered ready for immediate installation and use.

Most components in a Triplan wall can be re-used in connection with re-location.

The basic construction of the partitioning system provides excellent sound, fire and environmental properties.
